

# How to Synthesize Resources

Before you develop your solution to the global challenge, you will need to read the provided resources (and other materials if you would like) and come to understand the history and context of the problem, people who have been impacted, and various solutions that have been tried, proposed, or imagined. This is done through the process of synthesis.

In your proposal, you will articulate this understanding of the problem and previously implemented solutions through a written synthesis. The resources below provide not only an overview of the synthesis process, but also some tips and strategies for organizing your findings and your thoughts along the way. This is a skill that gets better with practice and focused attention! And it is key to a successful project.
