

Limnological Characteristics Reveal Metal Pollution Legacy in Lakes near Canada's Northernmost Mine, Little Cornwallis Island, Nunavut

Branaavan Sivarajah,^{1,2} Neal Michelutti,¹ Xiaowa Wang,³ Christopher Grooms¹ and John P. Smol¹

APPENDIX 1

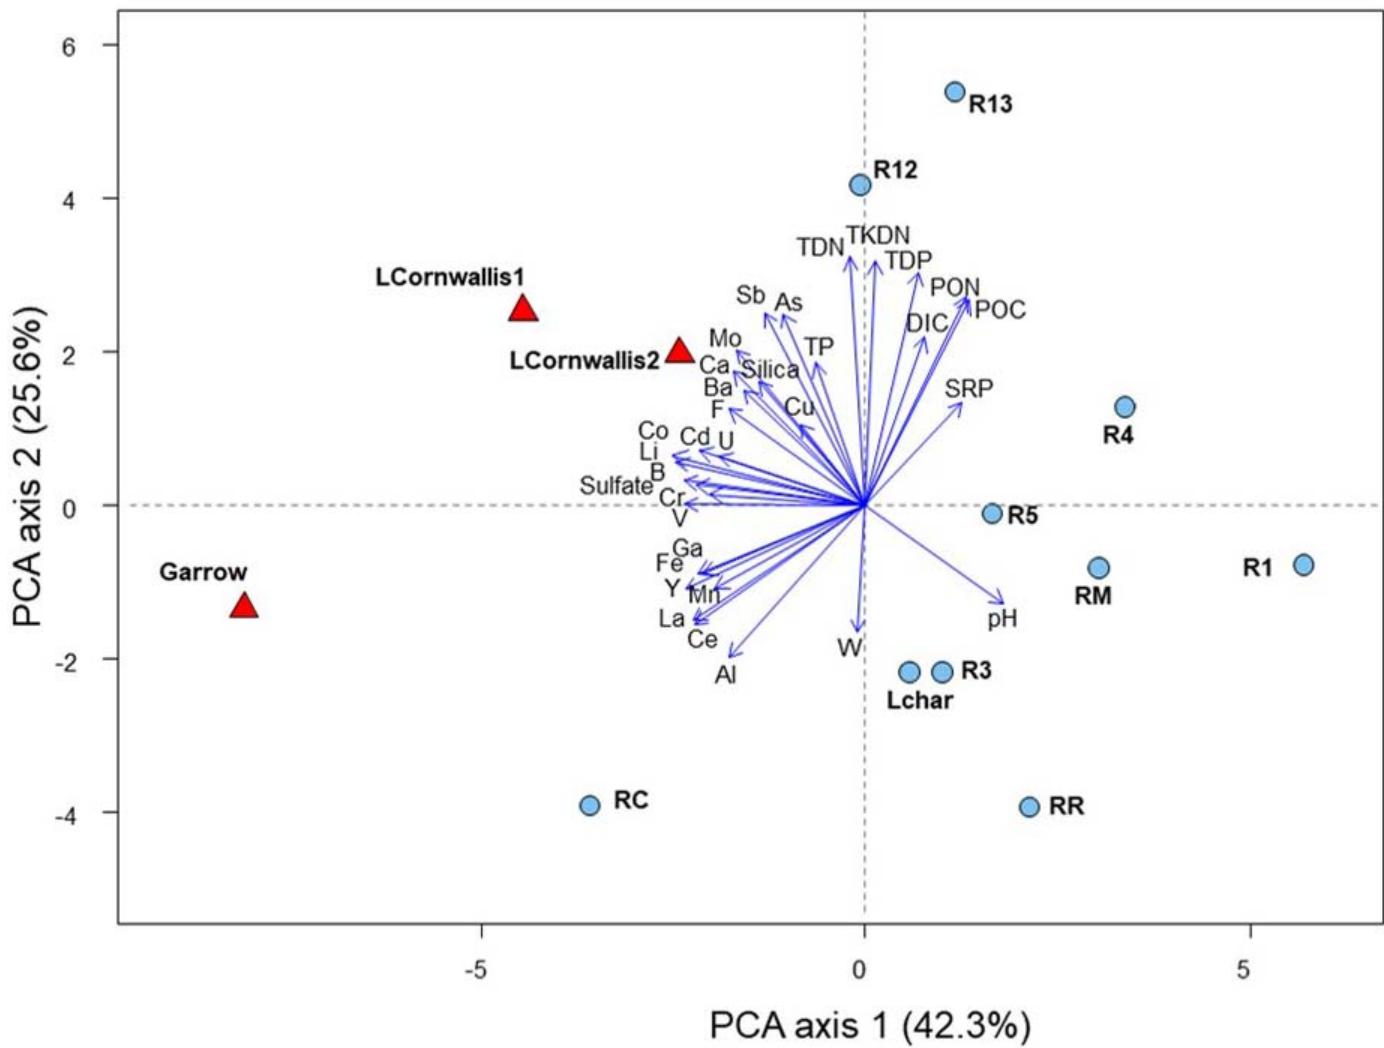

FIG. S1. A principal component analysis biplot with all 33 normal(ized) variables of the 13 sites from Little Cornwallis Island and Cornwallis Island (Nunavut, Canada). RM = Meretta Lake, RR = Resolute Lake, RC = Char Lake, and Lchar = Little Char Lake.

¹ Lake depth was not available for all study lakes. Lakes and ponds for which depth (Z_{max}) is available are Garrow, 49 m; RR, 22.5 m; RM, 9 m; and RC, 27.5 m. R1, R3, R4, R5, R12, R13 are shallow ponds around Resolute Bay where Z_{max} is less than 2 m.
