
Nan Wehipeihana
Research Evaluation Consultancy Limited

Abstract: This paper builds on a keynote paper presented at the 2018 Canadian Evaluation Society annual conference by Nan Wehipeihana, an Indigenous (Māori) evaluator from Aotearoa New Zealand. Nan defines Indigenous evaluation as evaluation that is led by Indigenous peoples; has clear benefits for Indigenous peoples; has Indigenous people comprising most of the evaluation team; is responsive to tribal and community contexts; and is guided and underpinned by Indigenous principles, practices, and knowledge. She argues for Indigenous led as a key criterion for Indigenous evaluation, with no assumed or automatic role for non-Indigenous peoples unless by invitation. She outlines a range of tactics to support the development of Indigenous evaluators and Indigenous evaluation and presents a model for non-Indigenous evaluators to assess their practice and explore how power is shared or not shared in evaluation with Indigenous peoples, as a necessary precursor to increasing control of evaluation by Indigenous peoples.

Keywords: control, culturally responsive evaluation, decision making, Indigenous evaluation, Indigenous-led, Kaupapa Māori, power

Résumé : Cet article vient compléter la conférence invitée de Nan Wehipeihana, une évaluatrice autochtone (māori) d’Aotearoa en Nouvelle-Zélande, lors du Congrès annuel de la Société canadienne d’évaluation en 2018. Mme Wehipeihana définit l’évaluation autochtone comme une évaluation menée par des personnes autochtones ; qui présente des avantages clairs pour les peuples autochtones ; dont l’équipe d’évaluation est surtout composée de personnes autochtones ; qui est consciente des contextes communautaires et tribaux ; et qui est orientée par des principes, des pratiques et des connaissances autochtones. Elle soutient que l’évaluation autochtone devrait être menée par des Autochtones, sans rôles présumés ou automatiques pour les personnes non autochtones à moins qu’elles ne soient invitées à y participer. Elle décrit toute une gamme de tactiques visant à appuyer le développement des évaluateurs et des évaluatrices autochtones et de l’évaluation autochtone. Elle présente aussi un modèle permettant aux évaluateurs et aux évaluatrices non autochtones d’évaluer leur pratique et d’explorer la manière dont le pouvoir est partagé ou non, en évaluation,

I start my presentation today with a mihimihi (a traditional introduction), as I start every presentation, whether at home in Aotearoa New Zealand or as a visitor on another people’s land. I do this by identifying my connections to places of significance to my people, our mountains, rivers, and marae (traditional meeting places) and I acknowledge my relationships to people both past and present. I also greet the traditional custodians of this land, attesting to my visitor status.

My mihimihi affirms my whakapapa (genealogy and identity) and my links to the land, to the natural environment, and to ancestors, the spirits, and the cosmos (Marsden & Royal, 2003). It reminds us of our connectedness to people and to place (Henare, 1988; LaFrance & Nichols, 2010), that we all connect to a spiritual source and exist in a web of reciprocity with each other and all creation (Spiller & Stockdale, 2013).

Entering Māori communities, like many Indigenous communities, typically involves other rituals of encounter such as pōwhiri (formal welcome), whaikōreoro

Mots clé : contrôle, évaluation adaptée à la culture, prise de décision, évaluation autochtone, leadership autochtone, Kaupapa Māori, pouvoir
(speeches), and karakia (ritual chants or prayer). Collectively, these cultural protocols signal a movement from the contemporary world dominated mainly by Western practices into a Māori world where Māori values and norms hold sway; and they help to prepare and settle us for the context in which we will be working (Wehipeihana & McKegg, 2018).

In this presentation, I define Indigenous evaluation, outline the rationale for Indigenous-led, put forward a strategy to support Indigenous-led evaluation, and share a model (Wehipeihana, 2013) for non-Indigenous evaluators to reflect on their positioning and ways of working to reveal the power dynamics that are a barrier to Indigenous evaluation being led by Indigenous peoples.

DEFINING INDIGENOUS EVALUATION

When I think about Indigenous evaluation (or in my case Kaupapa Māori evaluation), it is about evaluation by Indigenous, for Indigenous, with Indigenous, and as Indigenous; and where there is no assumed role for non-Indigenous people, unless by invitation. In Aotearoa New Zealand, “By Māori, for Māori, with Māori” (Cram, 2016; Cram, Chilisa, & Mertens, 2013) has variously been part of the research and evaluation agenda since the 1980s (and more recently “as Māori”: Durie, 2001; Wehipeihana, McKegg, Thompson, & Pipi, 2015) (see Table 1).

INDIGENOUS SELF-DETERMINATION IS FUNDAMENTAL

Kaupapa Māori evaluation has its foundations in the principle of Tino Rangatiratanga (chiefly leadership) which appears in the Māori version of the Treaty of Waitangi

<table>

signed by the British Crown and rangatira (chiefs) in 1840. Tino Rangatiratanga has come to be understood as a translation for the term “self-determination” and refers to determination by Māori of issues that have an impact on Māori. Tino Rangatiratanga has been at the forefront of Māori aspirations since the signing of the treaty in 1840 and remains so today.

Kaupapa Māori evaluation also draws on Kaupapa Māori theory (Smith, 1997) and its use as a strategic and political tool to advance Māori aspirations and agendas. In Aotearoa, Kaupapa Māori theory is the touchstone for research and evaluation with Māori. Cram (2001) defines Kaupapa Māori as a Māori way, underpinned by Māori philosophies, values, and principles that have an aspirational orientation or vision for Māori cultural, social, and economic wellbeing.

At the same time, “By Māori, for Māori” emerged as part of the political and aspirational discourse of self-determination around Treaty of Waitangi claims and Kaupapa Māori theory. “By Māori, for Māori” was a cultural and political position that asserted the right of Māori to lead their own development, that is, be self-determining. Māori expectations in relation to the conduct of research and evaluation began to be reflected in Māori-specific ethical guidelines, such as those developed by the Health Research Council of New Zealand (2010) and by government agencies such as Te Puni Kōkiri (1999)—the Ministry for Māori Development—and the Ministry for Social Development (2004). However, the role and appropriateness of Pākehā researchers in research involving Māori was keenly debated. On the one hand, you had Māori arguing there was no place for Pākehā in Māori research (Walker, 1990). On the other hand Smith (1990) identified four culturally appropriate research models to address Māori research needs. These models of research were seen to have merit at the time, to mitigate the lack of Māori research capacity and capability (Cram, 1997).

Conducting evaluation within a Kaupapa Māori framework means that non-Māori evaluators undertake evaluation at the invitation of, and in partnership with, the Māori community (Mertens, 2009). For non-Māori evaluators, their participation in Kaupapa Māori evaluation is akin to the notion of guesthood (Harvey, 2003). From the outset, being a guest signifies acceptance of being on someone else’s “turf” and a willingness to defer to the protocols of one’s host. Within this context, guests understand that their role will be determined by Māori, and, ideally, they will have a heightened sense of awareness of their positionality and of being an “outsider” in the evaluation (Brayboy & Deyhle, 2000).

So my definition of Indigenous evaluation has its roots in the struggle by Māori to be self-determining and to exercise control and decision making over their lives and the things that matter to Māori. Māori, however, are not alone in asserting a self-determination agenda. Indigenous people across the globe have long advocated for self-determination, and we see the importance of Indigenous self-determination reflected in Articles 3 and 4 of the United Nations Declaration on the Rights of Indigenous Peoples Resolution (adopted by the General Assembly on September 13, 2007) (see Table 2).
Table 2. United Nations Declaration on the Rights of Indigenous Peoples: Articles 3 and 4

| Article 3 | Indigenous peoples have the right to self-determination. By virtue of that right they freely determine their political status and freely pursue their economic, social and cultural development. |
| Article 4 | Indigenous peoples, in exercising their right to self-determination, have the right to autonomy or self-government in matters relating to their internal and local affairs, as well as ways and means for financing their autonomous functions. |

WHY INDIGENOUS-LED EVALUATION?

Much has been written about the location of research and evaluation within Western traditions, including the dominance of this scholarship (Bishop, 2005; Smith, 1999; Wehipeihana & McKegg, 2018); the role of imperialism, colonialism, and globalization in the elevation and privileging of Western research traditions (Chilisa, 2012; Cram, 2009); and research and evaluation as an exercise in power and political contestation for knowledge and resources (Bishop, 2005; Teariki, Spoonley, & Tomaana, 1992; Te Awekotuku, 1991).

If evaluation is to make a positive difference in the lives of Indigenous peoples, and to the things that matter for Indigenous peoples, then the dominant Western discourse needs to be held at bay. Indigenous-led, Indigenous control is essential if Indigenous values, principles, and ways of working are to hold sway in Indigenous evaluation and for the creation of a safe space for Indigenous communities and evaluators to be Indigenous.

When an evaluation is led by Indigenous people, they are more likely to have the cultural capital for the following:

- to facilitate respectful engagement and the observance of cultural protocols; they know what matters to get relationships and the evaluation off to a good start (Durie, 2001);
- to utilize Indigenous knowledge, methods, and ways of working in an evaluation; they can provide a cultural “reading” or assessment of the cultural fit or appropriateness of data-collection methods and tools for Indigenous peoples (Goodwin, Sauni, & Were, 2015);
- to facilitate understanding of what value and goodness look like through an Indigenous worldview; they can take the lead in sense making and analysis to ensure that the richness, subtlety, and nuance of meaning are not lost in translation and ensure the cultural validity of the evaluative conclusions drawn (Kirkhart, 2010).

When I listen to Indigenous speakers around the world, and I read the scant but growing indigenous evaluation literature, the “by” Indigenous or Indigenous-led
Increasing Cultural Competence in Indigenous-Led Evaluation

Criterion is not prominent, and Indigenous evaluation is conflated with culturally responsive methodologies. What this does, in my view, is to tacitly provide permission and/or by default suggest that it is “okay” for non-Indigenous evaluators to lead evaluation with Indigenous peoples.

In Aotearoa New Zealand, Māori aspirations for control over their own lives and for self-determination means that it is not okay for non-Māori to lead evaluation with whānau (extended family), hapū (clan or sub-tribe), iwi (tribe), or Māori organizations. However, this is not the norm outside of Aotearoa New Zealand, where non-Indigenous evaluators mostly lead evaluation projects with and in Indigenous communities. To a large extent, this stems from unquestioned assumptions by the international evaluation community that they can undertake high-quality evaluations when working in Indigenous communities, or cross-culturally, where the culture, context, and language(s) are different from their own; collect good data; undertake culturally valid analysis; and make sound evaluative judgements (Wehipeihana, Davidson, McKegg, & Shanker, 2010). There are increasing challenges to this assumption, but Indigenous evaluator numbers are small, with limited influence, and decision-making power is typically vested in non-Indigenous funders and evaluators.

My definition of Indigenous evaluation has Indigenous-led as a critical criterion, with no assumed or automatic role for non-Indigenous peoples, unless by invitation. It reflects my personal and professional belief about what it takes to conduct high-quality evaluation with Indigenous peoples. While many things can be learned in relation to cultural knowledge, some things can be known and revealed only from within the culture. For these reasons, “there is no substitute for the cultural capital (understanding, knowledge, and intuit) that comes from being of the culture” (Wehipeihana et al., 2010, p. 188).

SUPPORTING INDIGENOUS-LED EVALUATION

One of the arguments I hear most often is that there aren’t enough Indigenous evaluators for evaluations with Indigenous peoples to be Indigenous-led. And I agree, so very simply more Indigenous evaluators are needed, and this needs to be a priority. Drawing on the Aotearoa New Zealand evaluation experience, some considerations for the Canadian Evaluation Society to support Indigenous-led evaluation include the following:

- supporting the development of Indigenous evaluators and Indigenous evaluation
- partnering with Indigenous people to guide evaluation
- increasing the cultural competence of non-Indigenous evaluators
- elevating Indigenous values and principles in the practice of evaluation in Canada
- understanding the importance of relationships when engaging with Indigenous peoples
• advocating for the credibility and inclusion of Indigenous values, methods, and criteria.

Supporting the Development of Indigenous Evaluators and Indigenous Evaluation

Community-based evaluation workshops, some explicitly targeting Māori, and funded through health-promotion and Māori development agencies have provided alternative pathways for Māori to enter the field of evaluation and for Māori to guide evaluation in their communities. Evaluation mentors, both Māori and non-Māori, have encouraged and supported Māori to complete tertiary evaluation qualifications.

The Aotearoa New Zealand Evaluation Association (ANZEA) has supported Māori (and Pacific) evaluators by providing and resourcing a dedicated convening space at its annual conference. Māori evaluators determine how this time is used and share how they have applied matauranga Māori (Māori knowledge systems), te ao Māori (Māori perspectives and worldviews), and tribal knowledge and cultural protocols in their evaluation practice. This contributes to the building of Kaupapa Māori evaluation practice and principles and the strengthening of a Māori evaluation network.

In the development of the Aotearoa New Zealand evaluator competencies and evaluation standards, there was rich conversation and dialogue about what matters to evaluation in New Zealand, and what quality and goodness means. Māori evaluators decided that one way of expressing this was to do it on their own terms; this led to the formation of Ma te Rae (the Māori evaluation association)—the first Indigenous evaluation organization in the world. Ma te Rae actively participates in EVAL Indigenous, has its own programme of development work, and sits comfortably alongside ANZEA.

From a base of less than five in 1999, Māori evaluators numbered approximately 50 in 2018.3

Partnering with Indigenous People to Guide Evaluation

Deep cultural knowledge is needed for evaluators to work safely and respectfully with Indigenous communities. This is not a skate-over-the-surface knowledge to get you in the door by observing a few cultural protocols. It is cultural knowledge that will help you respectfully navigate entry, agree on ways of working, including methods and approaches, and support Indigenous people to give expression to their views, values, and experiences.

Non-indigenous evaluators need to find an Indigenous community advisor or guide, such as a tribal Elder or community leader, to help guide evaluators and the evaluation. These cultural advisors provide historical and contextual information, connect evaluators to people in the community, and guide their observance of cultural protocols.

A word of caution: Even when you are Māori or Indigenous, you can’t assume that your knowledge is applicable across all tribes and communities.
Increasing the Cultural Competence of Non-Indigenous Evaluators

First, do your homework before engaging with or entering Indigenous communities. Find out about the history and current context (Ormond, Cram, & Carter, 2006). Indigenous peoples get tired of telling and re-telling their history, their story. When you engage, after having done your homework, you display a genuine willingness and commitment to authentically engage with Indigenous people.

Second, look to expand your Indigenous networks. Start with people you know, and think broadly. It could be through the arts, sport, or a community project or organization. It may not be the specific Indigenous people you will engage with later, but you’re building your “general” Indigenous cultural knowledge and understanding, which will help you in future engagements.

Third, undertake relevant professional development. This would include Indigenous-specific evaluation workshops as well as professional development in related fields, for example, culturally responsive evaluation, or workshops on equity, diversity, and combatting racism. You might also need to look to non-evaluation fields such as community development, social justice, the arts, or the environment—where they offer insights about working with Indigenous peoples, as well as Indigenous studies short courses or papers offered by tertiary education providers.

Elevating Indigenous Values and Principles in the Practice of Evaluation in Canada

In Aotearoa Maori, values and principles have been elevated in the practice of evaluation by the national association. ANZEA included the principles of the Treaty of Waitangi—partnership, protection, and participation—as part of its constitution. The inclusion of the Treaty principles establishes the uniqueness of evaluation in Aotearoa and focuses our evaluation leadership on what is needed to ensure the inclusion and participation of Indigenous peoples and Indigenous perspectives in all aspects of evaluation (Wehipeihana, Bailey, Davidson, & McKegg, 2014). It also sends a clear message to organizations that fund evaluation about the centrality of Māori values and principles as integral to the practice of evaluation in Aotearoa. This was evident in the development of the New Zealand Evaluator Competencies and Evaluation Standards and the integration of Māori perspectives into these professional practice publications in Aotearoa.

Understanding the Importance of Relationships when Engaging with Indigenous Peoples

In Māori and Indigenous contexts, relationships are the glue, the anchor, and the currency for effective and respectful engagement (Wilson, 2008)—and for successful evaluations. It is through relationships that the evaluation process unfolds. And it is in relationships, and in doing things together, that relational trust is built. Relational trust paves the way for deeper and more meaningful connections.
Relationships therefore are not something the evaluator simply pays attention to; they are inextricably linked to engaging with Indigenous people and therefore Indigenous evaluation (Wehipeihana et al., 2015).

**Advocate for the Credibility and Inclusion of Indigenous Values, Methods, and Criteria**

While there have been gains at a governmental level, which specifically require the use or consideration of Kaupapa Māori principles in evaluation involving Māori, significant challenges remain. The role of Māori as leaders, or as core members of evaluation teams, and the observance of cultural protocols are relatively well established. However, challenges remain in the determination of what counts as credible evidence, accepted methods, and the inclusion of Māori cultural values and principles in the framing of evaluative criteria.

Culturally grounded, national Māori health frameworks accepted and promoted by the New Zealand Ministry of Health (Ministry of Health, 2015—*Te Whare Tāpā Whā* (The Four Cornerstones of Health) (Durie, 1994), *Te Pae Mahutonga* (Southern Cross Constellation—four elements of health promotion) (Durie, 1999), and *Te Wheke* (The Octopus—defining family health) (Pere, 1982)—have helped to elevate the importance of *tikanga Māori* (Māori cultural values) as critical to the assessment of Māori health outcomes. Furthermore, in 2019, there are positive indications of Māori values and principles being woven into national accountability frameworks for all New Zealanders, including Māori: “and that wellbeing considered from an Indigenous perspective moves the public policy discourse beyond Western constructs of wellbeing and enables an improved lived experience of wellbeing for everyone” (Te Puni Kōkiri & Treasury, 2019, p. i).

The Indigenous Approaches to the Living Standards framework developed by Te Puni Kōkiri (the Ministry for Māori Development) and the Treasury, while having a focus on wellbeing for Māori specifically, articulates a way of looking at wellbeing that can be applied to the full range of populations within Aotearoa New Zealand (see Box 1). The framework offers a way of accounting for various values and beliefs that drive people’s experiences of wellbeing and positions the New Zealand public sector to advance wellbeing in a different way, looking to respond to the various needs, interests, and aspirations of all New Zealanders (Te Puni Kōkiri & Treasury, 2019).

**Box 1. An Indigenous approach to the living standards framework**

There is no one way to look at wellbeing. People view wellbeing differently depending on their values, beliefs and social norms. The way Māori view wellbeing is different from the way other New Zealanders view wellbeing. It is informed by te ao Māori (a Māori worldview) where, for example, whenua (land) is not seen just for its economic potential, but through...
Increasing Cultural Competence in Indigenous-Led Evaluation

Māori have long advocated that what's good for Māori is good for all New Zealanders, and the Indigenous Approaches to Living Standards framework is one example of culturally grounded, Indigenous principles and perspectives embedded within a national evaluative framework. The key message for evaluators is to promote and advocate for the inclusion of Indigenous values in evaluation with Indigenous peoples, and to argue the benefits for non-Indigenous peoples. It will also be important to persevere with these efforts because, based on the New Zealand experience, challenging and changing deep-seated values does not happen at pace, nor does it typically come about through all-encompassing, sweeping reform. In our experience, changing fundamental values comes about through uncompromising, incremental radicalism.

A PARADIGM SHIFT IS NEEDED

Non-Indigenous evaluators occupy a privileged position that has conferred the authority and power to define reality, to make impactful judgments about others, and for those judgements to be seen as accurate and valid (Johnson, 2001; Kirkhart, 2015; Sanakar, 2017). It can therefore be challenging for non-Indigenous evaluators to change their practice and to relinquish power and privilege. They have to want to do things differently or have a reason to see the world through alternative eyes. This may be for social justice reasons (Greene, 2011; Mertens, 2009), because of an ethic of care, or to do no harm, or they may be convinced by methodological or practice arguments such as multicultural validity (Kirkhart, 2010). Whatever their motivation, this is not simply about what they know and how they do evaluation; it is fundamentally about how they view the world—so a paradigm shift, or shifts will be needed. For example, this might include moving from ...
... evaluation as transactional to evaluation as relational

Evaluation as transactional is about a focus on the processes of evaluation, the methods, tools, and timeframes needed to undertake an evaluation. Greene (2005) reminds us that evaluation is about not only what we do but also who we are and where we position ourselves in relation to others. The paradigm shift, therefore, to evaluation as relational recognizes that relationships are the primary currency of engagement for Indigenous peoples (Wehipeihana, 2013) and sees evaluation as inherently relational.

... evaluator as expert to Indigenous people as experts

Evaluator as expert acknowledges evaluators as having typically Western-framed evaluation qualifications, expertise, and experience (Wehipeihana & McKegg, 2018). The paradigm shift to Indigenous peoples as expert affirms the unique cultural knowledge of Indigenous people to enter, navigate, and engage with their people (Durie, 2001; Smith, 1999) and demonstrates that the currency of Western knowledge and experience diminishes in Indigenous contexts (Wehipeihana, 2013).

... evaluation as independent to evaluation as connected

Evaluation as independent and non-biased is about the privileging of Western methods, or the imposition of relation boundaries providing validity and credibility in evaluative judgments. The paradigm shift to evaluation as connected affirms being Indigenous, of the community, and a known face (Cram, 2001; Smith, 1999) as central to the accuracy, credibility, and cultural validity of evaluative judgements (Wehipeihana & McKegg, 2018).

... evaluation managed by non-Indigenous evaluators to evaluation managed by Indigenous evaluators

When evaluations in Indigenous communities are managed by non-Indigenous evaluators, Indigenous evaluators are not always present when key documents are developed and agreed and when significant decisions are made. Even when Indigenous evaluators are present, they are often out-numbered, junior in status, or in environments where there is no willingness or appetite to consider alternative options or views. So the underlying issue is one of power and control over decision making in evaluation (Wehipeihana et al., 2010). When evaluations are managed by Indigenous evaluators, they (mostly) get to decide what’s important and therefore prioritized, how resources are allocated, the criteria for evaluative judgements, what counts as valid evidence, and how findings are reported.

TOWARD INDIGENOUS CONTROL OF INDIGENOUS EVALUATION

Implicit in all of the paradigm shifts is the ceding of control or, as a minimum, the sharing of power and authority with Indigenous peoples. I developed a model (Wehipeihana, 2013) to explore to what extent evaluators share power and decision making in evaluation with Indigenous peoples.
Each aspect of the model is briefly discussed in Table 3. The model invites evaluators to reflect on their evaluation practice as a first step toward increasing decision making by Indigenous peoples in evaluation and with a clear goal of contributing to Indigenous-led evaluation. When applied as a self-assessment tool, it identifies how power is shared, and the extent to which Indigenous people have control over decision making in evaluation is made evident.

Some initial reflection questions were developed to support a self-assessment process:

- Who initiated the evaluation, and who benefits?
- What difference will it make for Indigenous peoples?
- Who will carry it out, and are they a good/appropriate “fit” for the community?
- How will the evaluation be carried out, and is the methodology a good/appropriate “fit” for the community?
- What is (or will be) the role of the Indigenous people or communities in the evaluation? Is this role resourced? How do they feel about their role in the evaluation? Does it match their expectations? And if not, can it be changed?
- What are the opportunities for you or the evaluation to move up and along on the continuum?
- What needs to happen to support this movement?
However, reflective questions—with an Indigenous interrogation lens—can be asked at any or every step of the evaluation process, from the commissioning of the evaluation (e.g., who initiated the evaluation and was the Indigenous community consulted?); managing the evaluation (e.g., who are the stakeholders, are Indigenous people represented, and are decision-making processes equitable?); the design of the evaluation (e.g., are Indigenous principles and methods included in the evaluation design and are Indigenous evaluators, and ideally local people, part of the evaluation team?); the analysis of the data (e.g., is there a process for checking the accuracy and cultural validity of data-analysis and evaluative conclusions?); and dissemination (e.g., how will the evaluation findings be shared with Indigenous communities?).

**CONCLUSION**

This paper has advocated for Indigenous-led as being central to Indigenous evaluation. It argues for personal paradigm shifts by non-Indigenous evaluators and funders of evaluation as necessary to disrupt their taken-for-granted assumptions of control and to radically shift the power balance by placing control in the hands of Indigenous peoples. Decolonizing one’s evaluation practice is a deeply personal experience. It requires introspection, looking deeply at one’s values and beliefs, soul searching, and surfaced and interrogating implicit assumptions and biases. It also requires humility, being open to other perspectives and worldviews, to recognize unearned privilege, and to share, and ultimately let go of, power. And it calls for

courage, to embark on a journey that will be personally and professionally confronting, and tenacity, to stay the course and stand up to cynics, critics, and racists. It’s an important first step.

At the same time, there is a need to confront institutional and structural barriers by supporting the development of Indigenous evaluators and an Indigenous evaluation community; elevating Indigenous values and principles in Canadian evaluation practice; advocating for the credibility and inclusion of Indigenous values, methods, and criteria within evaluation; and building the cultural competency of non-Indigenous evaluators and funders of evaluation.

NOTES
1 New Zealanders of European descent.
2 The Tiaki (Mentor) model, where research is guided by authoritative Māori; the Whangai (Adoption) model, where researchers become one of the whānau; the Power Sharing model, where the researcher and community jointly engage in the research; and the Empowering Outcomes model, where researchers provide information and answers to questions or topics that Māori want to find out about.
3 Evaluators who identify as Māori on the Ma te Rae Māori evaluation association membership list as of November 2018.
4 The model was initially titled “A framework for increasing control by Indigenous communities” for the AES 2013 Conference Wehipeihana (2013). Soon after (and also in 2013) I referred to it as “Locating evaluation practice: evaluation as an expression of power, control, and consequences.” For the CES 2018 keynote presentation, I referred to it as “A framework for assessing evaluator progress towards Indigenous cultural competency and Indigenous-led evaluation.” I tend to change the title to convey a key message or purpose to suit the audience or context.
